

Foundry systems with innovative conveyor technology

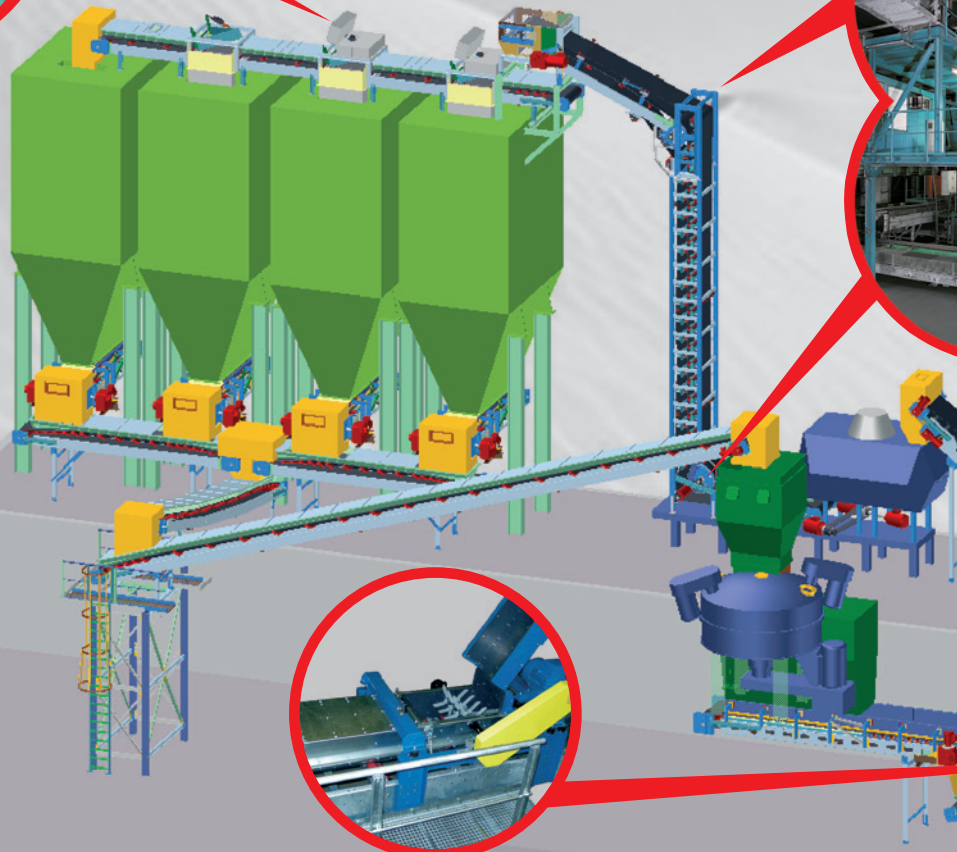

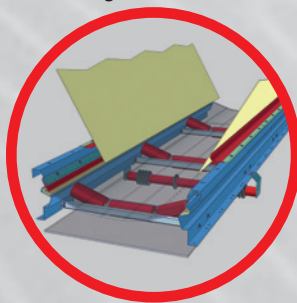

Variations in sand treatment

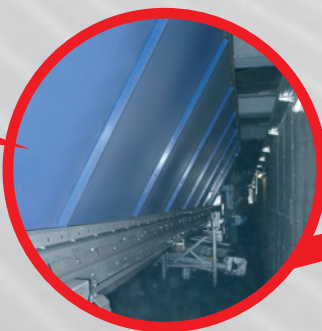

* Height and / or width adjustable stripper plow for sand distribution into bunkers

* Continuous skirting for trickling sand attachments

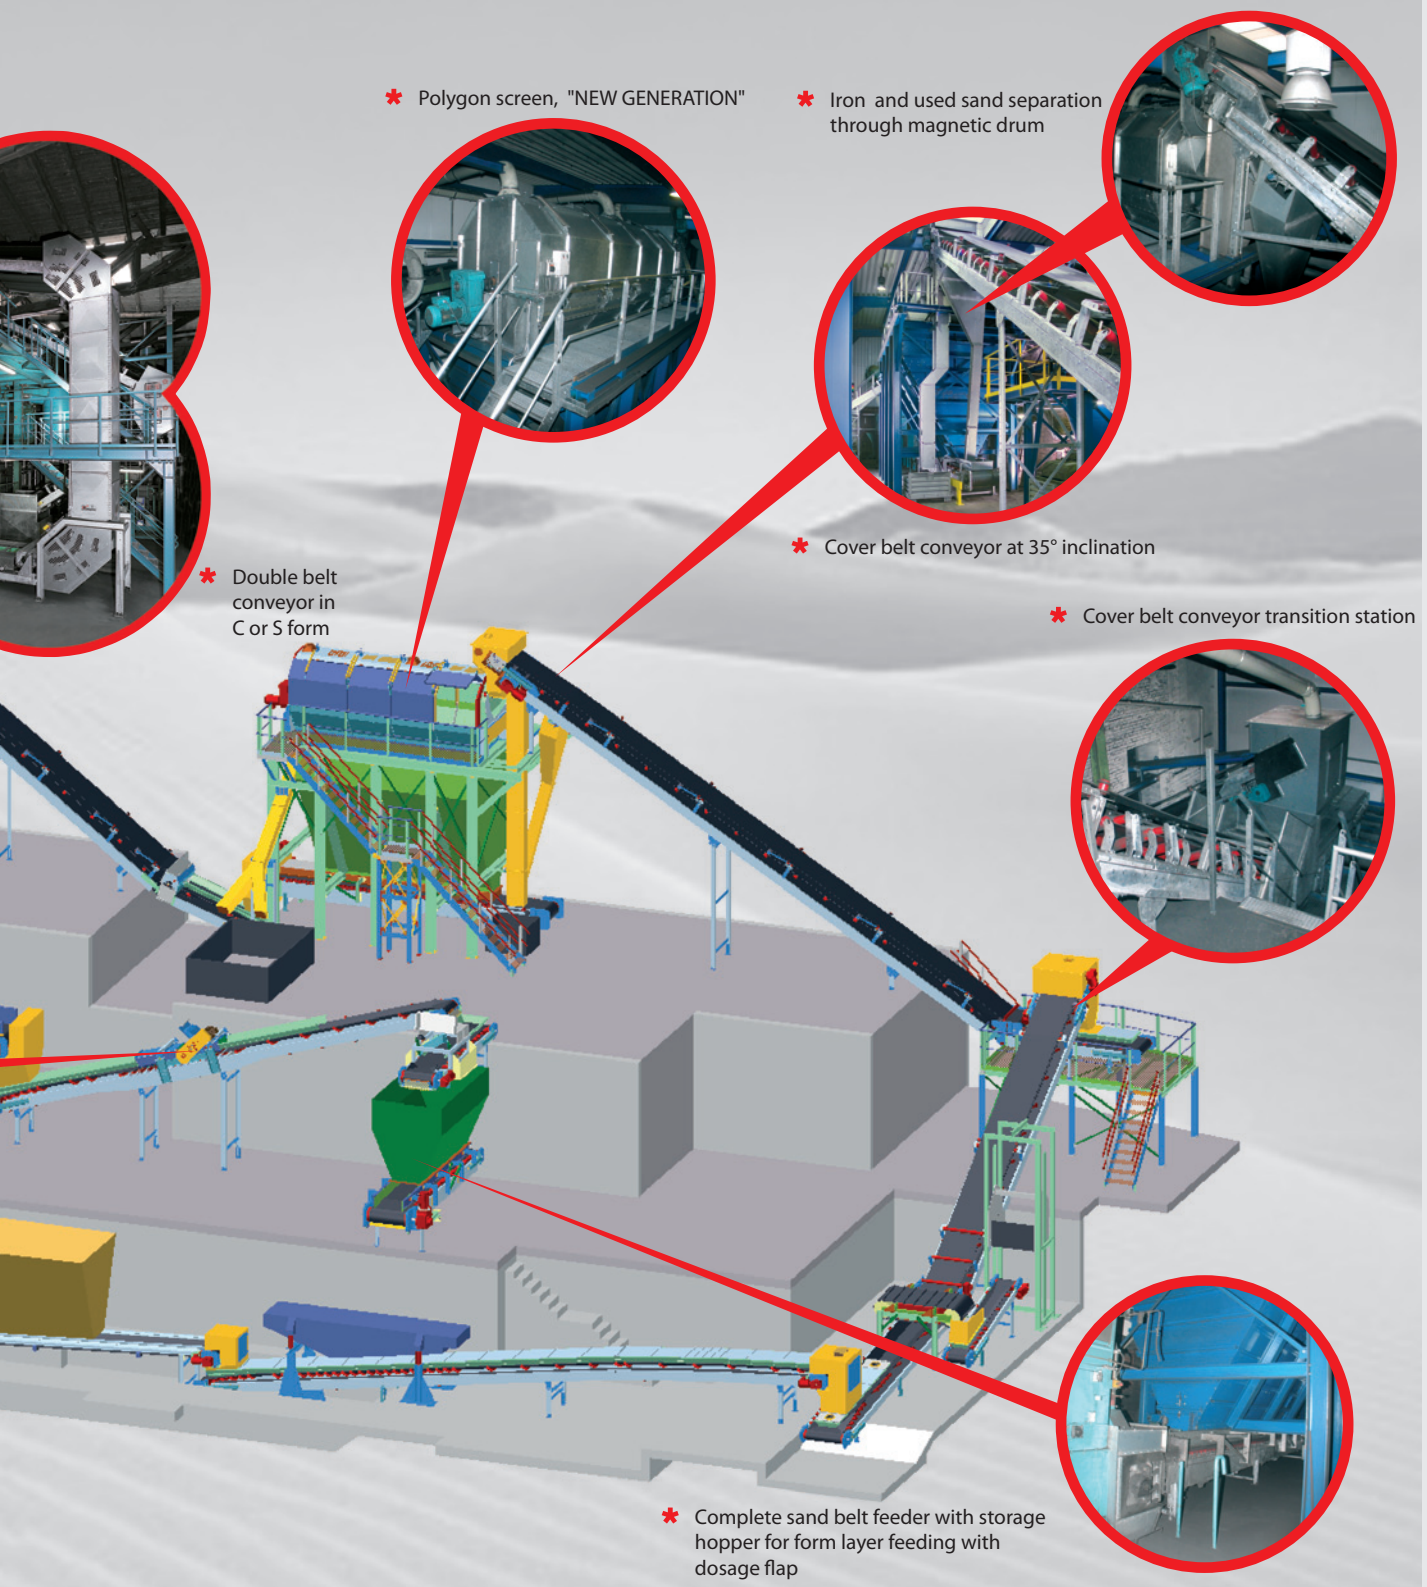

* Loosening whirler for continuous transport material

* Trickling sand sheets under form system

Sand treatment systems for steel casting, nodular graphite casting or aluminium casting are optimally planned and projected. Our own production, "Made in Hörstel", guarantees continuous quality and stable operational safety. Service and assembly performed by VHV mechanics ensure timely commissioning of the foundry systems.

Our systems are compatible with leading machinery manufacturers and thus enable problem-free transition, even at difficult interfaces. The modular construction and long-term experience lead the world-wide application of mini to mega sand treatment systems.

Compact sand treatment

* Cover belt conveyor with vertical loop buffer container

* Complete sand belt feeder with storage hopper

* Polygon screen, "NEW GENERATION"

* Polygon screen drum, inside view

* Cover belt conveyor with smooth belts at 35° inclination
