

VHV Scraper Systems

Linear scraper 45°

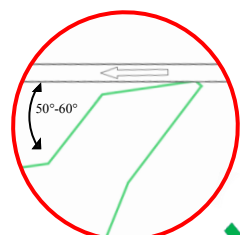

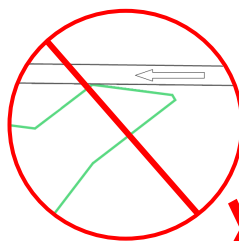

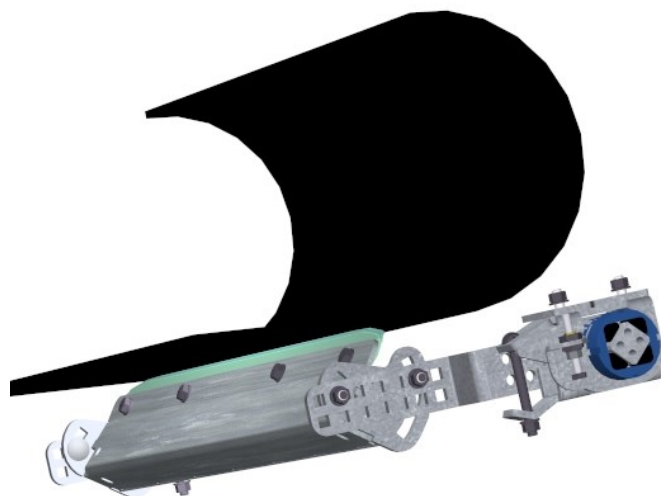

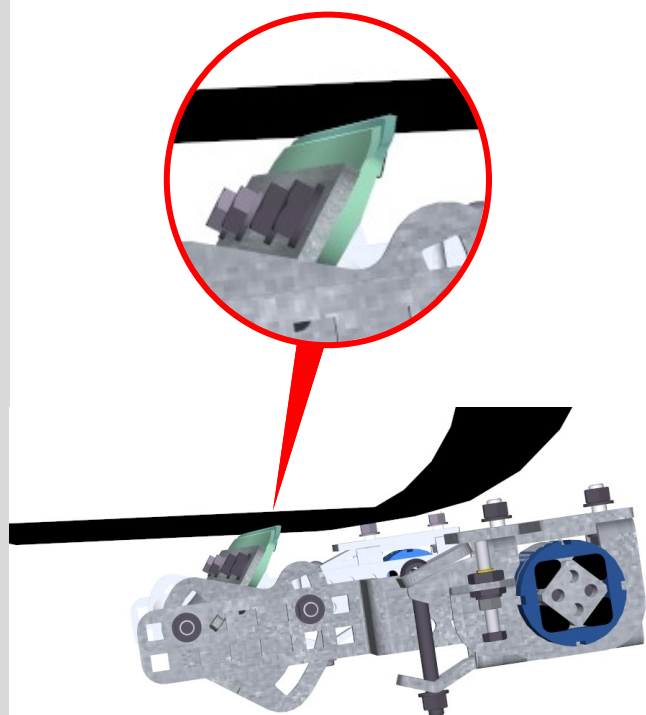

- * Effektive belt cleaning
- * Robust and mild to the belt
- * Applicable as „Duplex system“
- * Easy to maintain and assemble
- * Modularly replaceable and extendible

Due to the solid transverse traverse, the cast-in continuous blade and the sturdy tensioning elements the linear scraper 45° features excellent requisites for being used in various sectors of the bulk freight's conveyance. This type can be assembled as a Duplex system as well, where two linear scrapers 45° work one after another, but totally independently from one another.

The solid transverse traverse consists of a triangle geometry and supports the avoidance of cakings. Furthermore, the linear scraper 45° is completely made out of stainless steel.

As a matter of course this system is suitable for being used at reversible belt conveyors since it is stoppable pneumatically.

Angularly adjustable blade for ideal scraping results
